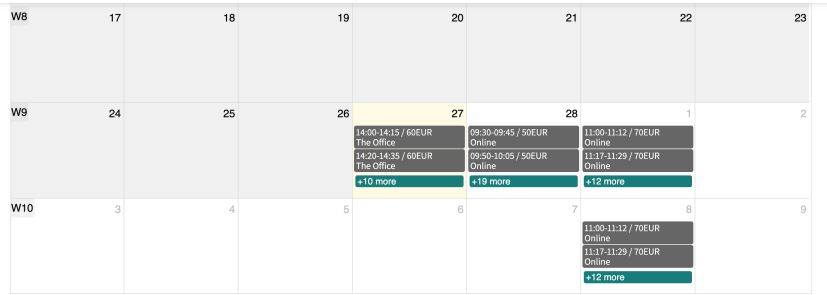
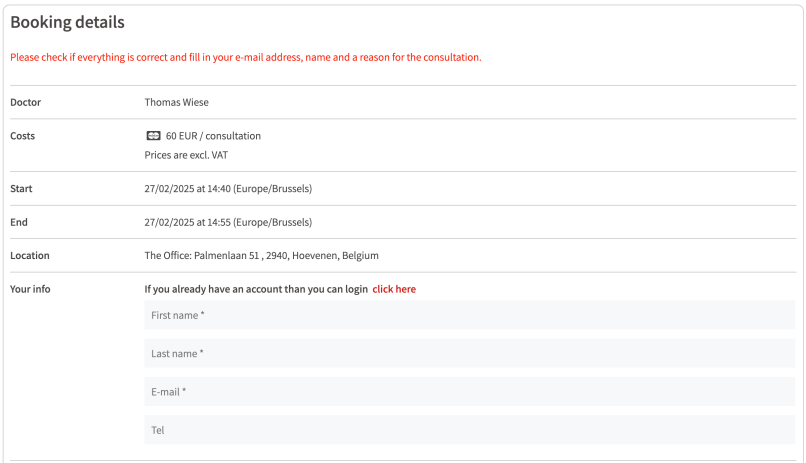
Doctor2Go Connect Documentation

What is Doctor2go Connect?

Doctor2go Connect is an easy-tuse and awsome plugin that you can use with any medical website. With Doctor2go you can can create a connection with your **Doctor2go Organisation** in the webcamconsult software, which allows you to create public doctor profile pages in your website for every doctor in your organisation. Those include a booking calendar which is synchronised with the webcamconsult software, this means al critical data like appointments, questionnaires from patients and much more is purely stored in the super secure webcamconsult software. Also most of the settings for your doctors are done in the webcamconsult software (eg. Payment settings / availabilities / doctor locations / questionnaires etc.)





This all is part of the **free version**!

The plugin could also be used as a **standalone version** as you can embed an external calendar for every doctor. A free solution is fillout which works with your gooogle calendar.

In the **pro version**, you will get a full patient area in your website, this means extra pages (with extra shortcodes), like eg: Patientregistration, login, lost password, patient appointments, liked doctors. Plus

How to Install the Doctor2Go Connect Plugin in WordPress

Installing the Doctor2Go Connect plugin involves uploading the plugin file directly to your WordPress site. Follow these steps to complete the installation:

Step 1: Log into Your WordPress Dashboard

Start by logging into your WordPress admin area by visiting yourwebsite.com/wp-admin and entering your credentials.

Step 2: Navigate to the Plugins Section

Once logged in, look for the **Plugins** menu on the left sidebar. Click on it to access the plugins management page.

Step 3: Add New Plugin

On the Plugins page, click on the **Add New** button at the top of the page to open the plugin installation interface.

Step 4: Upload the Plugin

1. Click on the **Upload Plugin** button at the top of the page.
2. In the upload section, click the **Choose File** button.
3. Locate the Doctor2Go Connect plugin .zip file on your computer and select it.
4. Click the **Install Now** button to upload and install the plugin.

Step 5: Activate the Plugin

Once the installation is complete, you will see a success message along with an **Activate Plugin** link. Click on this link to enable the Doctor2Go Connect plugin on your site.

Step 6: Configure Plugin Settings

After activation, you need to configure the plugin settings. Look for a new menu item related to Doctor2Go Connect in your dashboard or within the **Settings** menu. Follow the provided instructions to set up the plugin according to your needs.

Settings Doctor2Go Connect

Step 1: Log into Your WordPress Dashboard

Start by logging into your WordPress admin area by visiting yourwebsite.com/wp-admin and entering your credentials.

Step 2: Navigate to the Settings Section

Once logged in, look for the **Doctor2Go Connect** menu on the left sidebar. Click on it to access the settings page. You will also find a sub menu item Shortcodes info, very useful to copy paste shortcodes.

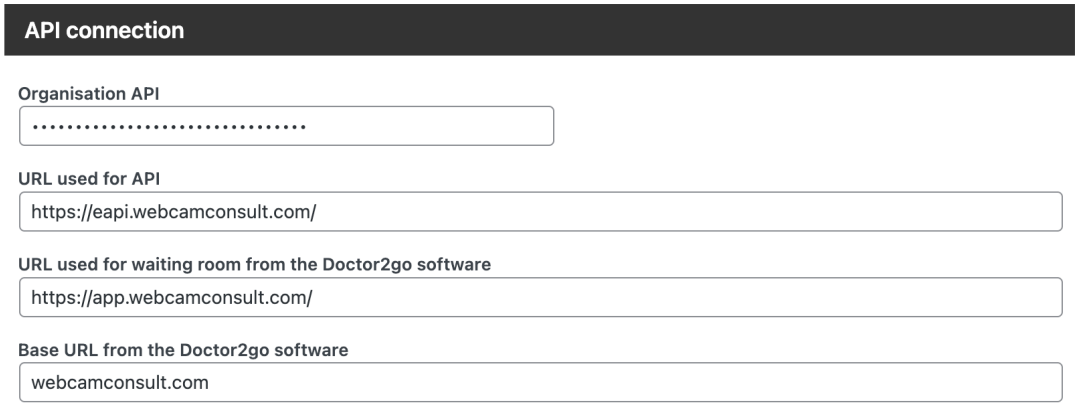
Step 3: Gor thru all the settings

On the Settings page you can do following Settings:

API connecttion

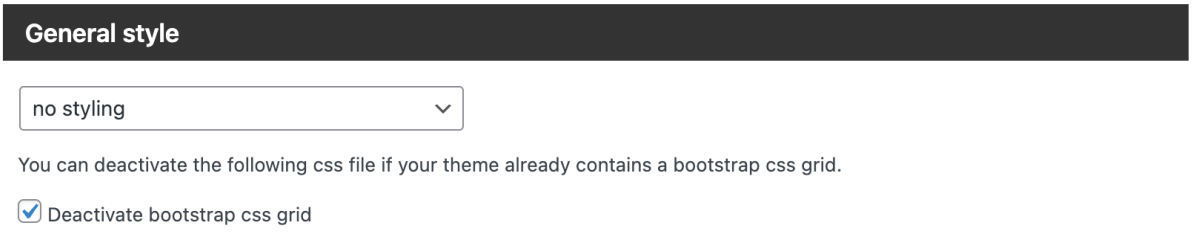
- Oragnisation API key => can be found on the organisation page in the webcamconsult software
- URL from API => 3 possible options https://eapi.webcamconsult.com/ or https://eapi.doctor2go.online or https://eapi.dermatology2go.online (the different urls will connect to different whitlabels in the webcamconsult software)
- URL from waiting room => 3 possible options https://app.webcamconsult.com/ or https://app.doctor2go.online or https://app.dermatology2go.online (the different urls will connect to different whitlabels in the webcamconsult software)
- Base url => 3 possible options https://webcamconsult.com/ or https://doctor2go.online or https://dermatology2go.online (the different urls will connect to different whitlabels in the webcamconsult software)

For more info about the different whitlabels ask your contact person at webcamconsult.



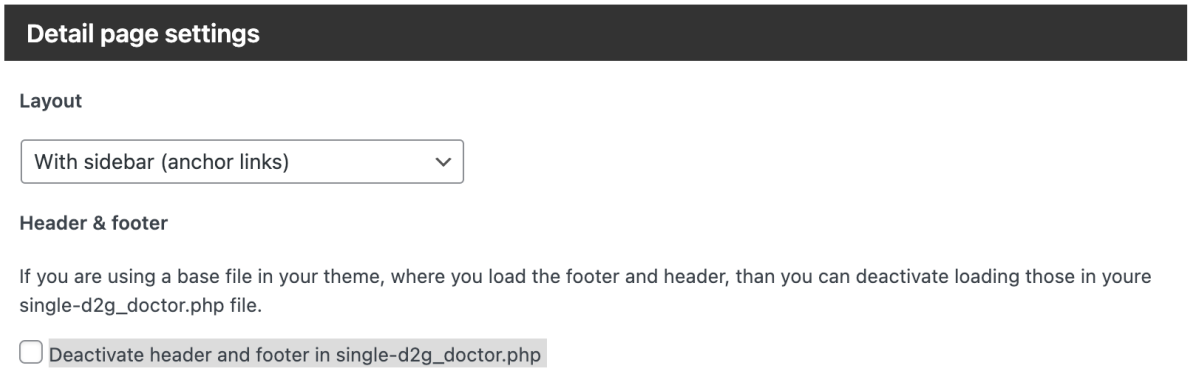
General Style

- Drop down gives 3 options:
    - Light theme
    - Dark theme
    - No CSS
- Per default the bootstrap css grid will be loaded using flex, this can be deactivated if you already have it



Detail page settings

- Layout => two different template files are available (with sidebar menu / without sidebar menu)
- Deactivate header and footer in single-d2g_doctor file (this is very useful when you are using a base file which already conatins the header and footer)
-



Placeholder image

This will be shown in case that a doctor has no featured image

User / profile settings for doctors

If you like to use the plugin standalone than you can activate the option “create doctor user and profile locally ”, when activated, a doctor profile will be created when creating a user with the role of a doctor

Create and edit doctors

When you use the plugin in combination with the webcamconsult software your dcotor profiles and doctor users will be created thru the API from webcamconsult, this is necessary because than the keys which are later needed for eg making a booking witnh a doctor are imediately copied into the databse from your website.

To create a doctor with the API you will need to login to your organisation in the webcamconsult software, go to basic profile and click on create d2g-connect account. If all your settings where done correctly, this will than create a user and a public profile in your website, you will also be redirected to the profile edit page (special easy to use custom form in the front-end from your website, so that doctors do not need to enter the wp-admin area) in your website, where you can fill in your public profile. The public profile excists out of 3 parts:

- Main info (location from your practice, languages you speak, spcialisations etc.)
- Biographie
- Experiences (Work / Education / Publications)

Editing doctors as an admin can of course be done in the **backend** just how you are used from all other plugins.

Shortcodes and corrseponding pages

When activating the plugin, automatically the required pages with their shortcodes will be created. Just like eg. in the woocommerce plugin.

Protected pages (pages which are only accessable when logged in):

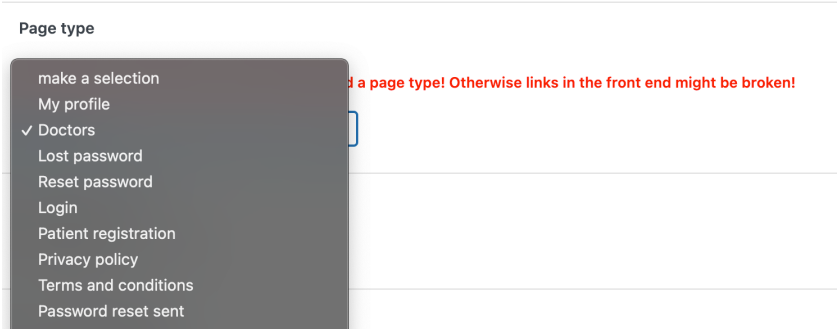
```
Version     Page                        Shortcode
FREE        'My profile'            => '[d2g_profile_edit]',
PRO         'Patient dashboard'     => '[d2g_patient_dashbaord]',
PRO         'Appointments'          => '[d2g_patient_appointments]',
PRO         'Account settings'      => '[d2g_account_settings]',
PRO         'Liked doctors'         => '[d2g_liked_posts]',
```

Public pages (pages wich are accessable to all visitors)

```
Version     Page                        Shortcode
Free        'Doctors'               => '[d2g_doctors_listing]',
Pro         'Lost password'         => '[d2g_lost_password_form]',
Pro         'Reset password'        => '[d2g_reset_password_form]',
Pro         'Login'                 => '[d2g_login_form]',
Pro         'Patient registration'  => '[d2g_registration_form]',
Pro         'Password reset sent'   => 'some text'
FREE        'Privacy policy'        => 'some text',
FREE        'Terms and conditions'  => 'some text',
```

Next to the shortcodes those pages have a page identifier which will be used to generate dynamic links between the pages (eg. Lost password link on the login page). This allows you to change page names and slugs without breaking any links. This is also very useful when you are gonna translate those pages as the page identifier will normal ne copied into your translation.

Page identifiers can of course also be set manually should this be needed.



Basic shortcodes

Following shortcodes are included in the free version and can be used in pages from your website.

[d2g_doctors_listing]

Use this shortcode to display a list of doctors on a page. It includes a "Load More Doctors" button that loads additional doctors based on the "posts_per_page" setting.

Following parameters can be used to change the view from the listing

Parameter	**Possible values**
template	grid (default) / list
columns *Amount of columns (only applicable with the grid template.)*	2 / 3 (default) / 4
posts_per_page *Amount of doctors shown on a page.*	Any number larger than 0 (6 = default) Or -1 (All doctors will be shown.)
wrapper_class *css class used for the outer wrapper (optional)*	Any string

[d2g_profile_edit]

Use this shortcode to display the form doctors use to create or update their profiles. No parameters are required.

Pro shortcodes (PRO version only*)

Following shortcodes are included only included in the paid version and can be used in pages from your website. Click here to get your paid license now.

[d2g_search_mask] (PRO version only*)

Use this shortcode to display the search form on the doctor overview page. It must be used with the listing shortcode. No parameters are required.

[d2g_single_doctor_info] (PRO version only*)

Use this shortcode to display a single doctor in a compact format, similar to the grid overview on the front end. It can be placed anywhere on your website, such as the sidebar.

Parameter	**Possible values**
doc_id	ID from doctor post, can be found in the backend overview from the doctors

[d2g_single_doctor_locations] (PRO version only*)

Use this shortcode to display a doctor's locations, similar to the locations section on the doctor detail page. Ideal for a contact page or website footer.

Parameter	**Possible values**
doc_id	ID from doctor post, can be found in the backend overview from the doctors
wrapper_class *css class used for the outer wrapper (optional)*	Any string

[d2g_single_doctor_calendar] (PRO version only*)

Use this shortcode to display a doctor's calendar, similar to the calendar section on the doctor detail page. Ideal for a front page or website sidebar.

Parameter	**Possible values**
doc_id	ID from doctor post, can be found in the backend overview from the doctors
wrapper_class *css class used for the outer wrapper (optional)*	Any string

[d2g_registration_form] (PRO version only*)

Use this shortcode to display the registration form for patients. No parameters are required.

[d2g_login_form] (PRO version only*)

Use this shortcode to display the login form. No parameters are required.

[d2g_lost_password_form] (PRO version only*)

Use this shortcode to display the lost password form. No parameters are required.

[d2g_reset_password_form] (PRO version only*)

Use this shortcode to display the reset password form. No parameters are required.

[d2g_patient_menu] (PRO version only*)

Use this shortcode to display a menu form the patient pages. Ideal it is used with in combination with the following shortcodes: d2g_account_settings / d2g_patient_appointments / d2g_liked_posts / d2g_patient_dashbaord . No parameters are required.

[d2g_patient_dashbaord] (PRO version only*)

Use this shortcode to display the patient dashboard, the page patients are redirected to after logging in. No parameters are required.

[d2g_account_settings] (PRO version only*)

Use this shortcode to display the search form on the doctor overview page. It must be used with the listing shortcode. No parameters are required.

[d2g_patient_appointments] (PRO version only*)

Use this shortcode to display the account settings form, allowing patients to update their email, phone number, and password. No parameters are required.

[d2g_liked_posts] (PRO version only*)

Use this shortcode to display the liked doctor's from a patient. No parameters are required.

Multilingual

The plugin has been tested with Polylang and Polylang Pro. The dynamic links between pages where optimised using Polylang, this could be a problem with WPML as it not has been tested yet, but for the rest it shoukld also work with WPML.

Webcamconsult settings

Most of the settings for your doctors are done in the webcamconsult software:

- Payment settings
- Availabilities
- Quiestionnaires
- Locations

For more info about how to do things in the webcamconsult software, please visit the website: https://webcamconsult.com/en/support/general-manual
